

TECH BULLETIN: Calipers and Abutment Clips

SUBJECT:

This Brake System uses Caliper Abutment Clips to ensure proper braking.

ISSUE:

Caliper Abutment Clips can lose significant tension due to the heating and cooling during normal brake use. Corrosion can also degrade these clips. These factors can affect proper braking and cause uneven pad wear, resulting in a brake squeal and premature pad wear. Rubber bushings on this system can also become cracked or split over time.

SOLUTION:

Install a new Brake Hardware Kit that includes new Caliper Abutment Clips and rubber bushings to ensure that all the parts in the brake system are working correctly.

OE brake designs now rely on brake hardware to play a larger role in the brake system.

Installing new brake hardware can help the entire brake system function properly.
